

Sprint2 Retrospective

Team FireUp

Group: FireUp

Members: Di Yao, Hanxun Huang, Kai Sun, Yijie Wu

1.What went well?

Two user stories is implemented during this sprint and each one of them is functional. Other two has some bugs that need to be fixed in next sprint.

1) Instant message

As a user, I would like to chat with other users in real time.

Add instant message function that allow user to chat with each other in real time. Add friend function that users can only chat with their friend. User can look up the recipe find the public information about the user. User can also send friend request to the user if he or she accept it, they can chat with each other using built-in instant message function.

2) As a user, I would like to be able to create my own recipe and share it with other users

As a user, I would like to view the recipe feed locally and world wide.

User can look up the recipe feed from local feed which is recipe created by user near him. User can also look up the entire feed around the world. User can also look up local feed at specific location. User can also look up recipe feed of other user that he or she is following.

3) Comment on other recipe.

As a user, I would like to write some comments on other people's post to share my ideas and also see replies to my comments.

There will be a comment option on the bottom of each post, all users can read and write comments include the writer. Each time there is a comment update, the writer will be notified, when people reply to a comment, the one who makes the comment will be notified as well.

4) Follow or unfollow other user

As a user, I would like to follow or unfollow other user.

After read each post, users can choose to follow these foodies if users are interested in these food lover. Users can also unfollow user if they want. User will be able to see update on their following user and view their recipe in specific feed section.

2. What did not go well?

Both the comment function and follow/unfollow function has UI display issues, the comment also issue with the objectID retrieve from database. The real-time chat function need Apple Developer account to access the push function.

3.How should you improve?

- 1) Fix the follow/unfollow UI display issue. - Di Yao
- 2) Fix the comment UI display issue. - Yijie Wu
- 3) Add query to retrieve objectID of the feeds in comment function. - Yijie Wu
- 4) Set up the developer account and push functions.
