

Sprint1 Retrospective

Team FireUp

Group: FireUp

Members: Di Yao, Hanxun Huang, Kai Sun, Yijie Wu

1.What went well?

Every user stories are implemented during this sprint and each one of them is functional.

1) Sign in, Sign up and password recovery.

As a user, I would like to sign up, sign in and recover my password or username if needed.

Add sign in page when user open the application. Add sign in, sign up, lost password or username and browse without sign in button. If user click sign in, check username and password with the server. If user click sign up button, redirect to the sign up page. If user click lost password button redirect to the recovery page. If user click browse without sign in, then redirect to the feed page.

2) Profile Page

As a user, I would look at other user's profile and share mine.

Users can update their own information and choose what kind of information to share with other users. User can look up other user's public information. On the profile page, there should also have friend request button and follow/unfollow button.

3) Recipe feed.

As a user, I would like to view the recipe feed locally and world wide.

User can look up the recipe feed from local feed which is recipe created by user near him. User can also look up the entire feed around the world. User can also look up local feed at specific location. User can also look up recipe feed of other user that he or she is following.

2. What did not go well?

There is a bug when refreshing feed due to different platforms (iPhone6/iPhone5). The reason is unknown, we will check the UI code, the feed data can be received but cannot display.

There is a bug in login page, when the user closes the application and open it again, the user login information will cause invalid token exception. This bug is due to the Parse SDK, we will update the SDK in future.

3.How should you improve?

- 1) Currently there are no email verification and password recovery function, we will add these in next sprint.
- 2) The current UI design is not user friendly, we will redesign the UI after we finish all the functional requirement.
- 3) Password recovery and email verification is not implemented. We will add it in next sprint
